Supplemental Action

It has come to the examiner's attention that claim 47, originally added with the amendment of July 19, 2006, has not been included in the rejection of the claims. The finality of the previous action is hereby vacated, and the instant Office action will address all claims currently pending.

Information Disclosure Statement

Applicant should note that the large number of references in the IDS of June 4, 2007 have been considered by the examiner in the same manner as other documents in Office search files are considered by the examiner while conducting a search of the prior art in a proper field of search. **See MPEP 609.05(b)**. Applicant is requested to point out any particular references in the IDS which they believe may be of particular relevance to the instant claimed invention in response to this office action.

Election/Restrictions

Claims 1-26 and 46 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made without traverse in the reply filed on 2/13/06.

Specification

The disclosure is objected to because of the following informalities: there is no brief drawing description for Figures 10I and 13E.

Appropriate correction is required.

10/656,597 Art Unit: 3739

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 27, 29, 30, 32-45 and 47 are rejected under 35 U.S.C. 102(e) as being anticipated by Maguire et al. (US 6997925).

In figure 21A Maguire et al. disclose an electrosurgical device comprising a shaft having a distal portion; a return electrode (2130) at the distal portion of the shaft and having a return electrode surface area, the return electrode distally terminating in a tip portion; at least one active electrode (2126) at the distal portion of the shaft and having an active electrode surface area, the active electrode further comprising an arm portion being radially spaced from the return electrode, wherein the tip portion of the return electrode is distally spaced from the arm portion of the active electrode; and a connector located at the proximal portion of the shaft and adapted to couple the return electrode and each active electrode to respective poles of the high frequency power supply.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3739

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 28 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Maguire et al. Maguire et al. teach all of the limitations of the claims except the return electrode having a surface area greater than the active electrode and the raise surface area comprising a coil. It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the return electrode with a greater surface area than the active electrode and to provide a coil as the raised surface area since it has been held that changing the size and shape of the essential working parts of a device only involves routine skill in the art.

Response to Arguments

Applicant's arguments filed July 19, 2006 have been fully considered but they are not persuasive. Applicant argues that Maguire fails to disclose, teach or suggest an active electrode comprising an arm portion radially spaced from the return electrode. According to Applicant, all of the elements of Maguire are disposed about a common radius and no element is provided at the center of the circle formed by the ablation elements. In figure 21A Maguire clearly illustrates an active electrode radially space from a return electrode. Regarding the argument that, the positive and negative ablation elements of Maguire fail to anticipate the active and return electrodes of the independent claims, see column 38 line 57 through column 39 line 14 of Maguire. It is noted that the Advisory Action of May 30, 2007 maintained the rejections were tenable

Art Unit: 3739

and that applicant's arguments were not persuasive. Applicant has not provided any claim amendments nor any new arguments with the RCE filed on June 4, 2007.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Peffley whose telephone number is (571) 272-4770. The examiner can normally be reached on Mon-Fri from 7am-4pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Linda Dvorak can be reached on (571) 272-4764. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
